

THORN

X-Force

A range of specialist fluorescent 'proof' luminaires for harsh environments

Introducing X-Force

The X-Force range is designed to withstand difficult and demanding environments. Sharing the same high build quality and strong IP65 compliance, X-Force products continue to perform in the most arduous wet and dusty conditions.

But not all industrial working locations are the same. Each application presents a different challenge. Maintaining good lighting levels and a safe working environment requires the right luminaire to be selected – one that can face up to these challenges and come out on top.

ImpactForce

ImpactForce takes its name from the tough polycarbonate diffuser that is able to withstand high impacts of up to IK09. ImpactForce is ideal for locations where impact to the luminaire may occur or vandal resistance is required. Typical applications include loading bays, multi storey car parks, subways, sports stadiums and warehouses.

CorrosionForce

As the name suggests, CorrosionForce is the answer when you need to light an area where the atmosphere contains trace chemicals that may contaminate a standard IP65 luminaire. Typical applications include food processing and preparation areas where special cleaning agents are used.

ColdForce

Lighting a cold store or chill room is challenging, as the low temperatures severely limit the performance of most luminaires. With a high specification Industrial Ballast and thermal over tubes, ColdForce ensures good light performance down to temperatures of -30°C. Typical applications include cold stores and chill rooms.

HeatForce

High ambient temperatures have a lasting effect on the reliability of most luminaires. HeatForce is designed to operate in temperatures up to 65°C. The tough construction and special control gear ensure consistent and reliable lighting, even when things start to heat up. Typical applications would be boiler rooms and any areas where machinery or other equipment generate high ambient temperatures.

StormForce

StormForce is a rugged luminaire with added strength. Internal steel supports and special fixing brackets, for mounting onto stanchions or flexible structures that are exposed to high winds and rain, provide extra resistance to harsh weather conditions. This type of fitting is ideal for power stations and exposed coastal areas.

Performance, Efficiency and Comfort (PEC) – for a better lit environment

The aim of Thorn Lighting is to improve quality of life by lighting people and places. Supporting this mission is our PEC programme.

The PEC programme is based on the principle that Performance, Efficiency and Comfort can be measured to deliver efficient and reliable lighting that contributes to a healthy and comfortable environment. X-Force delivers the right light in the right place at the right time.

Performance: Providing the best visual effectiveness

- The X-Force range has an optical system specially optimised for fluorescent lamps. The high reflectance back plate and specially designed prismatic controller give a wide light distribution with good glare control, uniformity and modelling. The optic gives high light output ratios of up to 93%.
- Fluorescent light sources ensure very good colour rendition (Ra over 80).

Efficiency: Conserving energy and effort and reducing CO₂ emissions and waste. Providing lighting that is practical and efficient to install, operate and maintain.

- X-Force uses the latest technologies to set the pace in environmental sensitivity, such as high output and high efficiency T16 (T5) lamps. High Frequency Digital (HFD) dimmable versions are also available.
- X-Force is always fit for purpose. Within the range there is a choice of diffuser materials, depending on the particular conditions of the application. The clever design of the deep channel gasket ensures the long life of the IP65 seal.
- With a focus on easy installation and maintenance, the range comes with quick-fix brackets as standard and easy to use stainless steel gear tray clips.

Comfort: giving people satisfaction and stimulation

- High Frequency (HF) electronic ballasts prevent any flicker associated with fluorescent lighting and help to remove any discomfort in the workplace.
- Material choice and emergency versions ensure a feeling of safety.
- Effective glare-free light.

X-Force application areas

CorrosionForce Food Preparation

ImpactForce is a vandal resistant luminaire that can withstand accidental collisions. Typical applications are loading bays, multi storey car parks, subways, sports stadiums and warehouses.

- High impact polycarbonate diffuser
- T16 (T5) and T26 (T8) options
- High Frequency Digital (HFD) dimmable and emergency options

CorrosionForce is suitable for any location where the atmosphere contains trace chemicals or where special cleaning agents are used. Typical applications include kitchens, food processing areas, dairies and agricultural buildings.

- PMMA (acrylic) diffuser
- T16 (T5) and T26 (T8) options
- High Frequency Digital (HFD) dimmable and emergency options

ColdForce provides an IP65 lighting solution in low temperature locations. Typical applications are cold stores and chill rooms.

- High impact polycarbonate diffuser
- -30°C low temperature operation
- Long life Industrial Ballast

HeatForce is a lighting solution for any location that may have high ambient temperatures. Typical applications are boiler rooms or industrial locations.

- High impact polycarbonate diffuser
- Up to 65°C high temperature operation
- Long life Industrial Ballast

StormForce can be used on walkways, metal gantries and flexible structures. This fitting is ideal for applications such as power stations and exposed coastal areas.

- Polycarbonate or PMMA (acrylic) diffuser options
- T16 (T5) and T26 (T8) options
- Emergency options

X-Force – designed to perform in the toughest of applications

In situations where conventional luminaires are ready to give up, the new X-Force range really comes into its own. Whether confronted with dirt, dust, moisture or chemical atmospheres, within the X-Force range there is a product that gives durable functionality and excellent lighting quality in a wide range of difficult environments.

Stainless steel tamper resistant toggles

The stainless steel toggles are supplied as standard. The toggle easily fits into the canopy. Once fitted, the toggles remain secure.

The diffuser is clamped into position with a simple click of the toggles. A screwdriver is required to remove the diffuser, deterring any unwanted interference with the luminaire.

Quick-fix brackets

The X-Force range is supplied with quick-fix brackets as standard. The brackets fit onto the ceiling and then the canopy can be snapped into place.

Crucially, the quick-fix brackets can be used without having to perforate the top of the canopy, ensuring the luminaire maintains the strong IP65 rating.

Easy to clean

The X-Force range meets the recommendations of the International Food Standards (IFS) and British Retail Consortium (BRC).

The sleek design has a minimum 15° slope that makes it easy to clean and difficult for dust or moisture to accumulate.

Stainless steel gear clips

The stainless steel gear tray retaining clips sit within the canopy. These are cleverly designed to allow the gear tray to be easily clipped in and locked into position.

When essential maintenance is required, the gear tray can be released and will then hang from the clips, saving time and effort.

Materials and construction

The key materials employed in the manufacture of X-Force luminaires are:

- **Glass Reinforced Plastic (GRP)**

The main advantages of GRP are chemical resistance and strength. It has a high strength-to-weight ratio and outstanding flexible strength. It is ideal where luminaire bodies are exposed to harsh environments as it provides resistance to UV light, extreme temperatures, salt air and a wide variety of chemicals.

- **Polycarbonate (PC)**

Transparency, excellent toughness and a good dimensional stability make polycarbonate (PC) one of the most widely used thermoplastics for lighting diffusers. Constraints include modest resistance to UV radiation.

- **Polymethylmethacrylate (PMMA)**

Better known as acrylic, this material is used for diffusers due to high light transmittance and good UV resistance. Limitations of acrylic are low impact strength and poor flame resistance.

Comparison table	PMMA	PC	GRP
UV Resistance	Good	Fair	Good
Impact Resistance	0.2Nm	10Nm	0.35Nm
Resistance to ageing	Excellent	Good	Excellent
Silicone free	Yes	Yes	Yes
Halogen free	Yes	Yes	Yes
Glow wire test	650°C	850°C	850°C
Heat resistance of plastics	95°	125°	160°
UV Transmittance	91%	89%	N/A

X-Force for emergency

European safety standards specify that emergency lighting is required in all public places to enable a safe exit if the mains power supply fails. Emergency lighting has to provide sufficient light to reduce confusion and aid safe evacuation.

Thorn's X-Force range offers a number of emergency lighting options that are integrated into the luminaire, ensuring a safe and totally compliant lighting scheme. This approach improves the appearance of the location and helps reduce installation cost and complexity.

X-Force emergency fittings guarantee emergency operation for three hours, allowing full continuity of emergency lighting after an evacuation. To meet legal requirements for the inspection, test and maintenance of emergency lighting, SelfTest emergency versions include a diagnostic microprocessor that will automatically perform both function and duration tests.

Quick and easy to install, without additional cabling, SelfTest fittings monitor and automatically test the emergency functionality at specified intervals, displaying the status of each unit using a bi-colour LED. Any problems with the circuit, battery or lamp are detected and indicated early, removing the need for labour intensive manual testing.

Key Features in emergency lighting

- Compliant with EN60598 2.22.
- Automatic commissioning, without the need for programming, saves time and money.
- Faster than average recharge time of 10-15 hours for SelfTest and addressable versions allow earlier reinstatement of the emergency system after full battery discharge.
- Addressable versions are available on request. These enable a responsible individual to centrally monitor and record the status of emergency luminaires using Thorn's Explorer technology. Please contact your Thorn representative for further details, or visit our website: www.thornlighting.co.uk
- Three hour operation provides continuity of emergency systems after testing or evacuation of the site.
- Bi-colour LED provides clear status indication (red for faults, green for healthy)
- Boost starting gives higher lumen output during the critical switchover phase, ensuring greater visibility of potential hazards.

X-Force for dimming and energy saving

The X-Force range offers energy saving with the option of dimmable luminaires or Switchlite detectors.

In combination with Thorn's Indoor Lighting Control range, X-Force installations will provide light at the right place, the right time and with the right light level, to increase efficiency and comfort.

SensaLite is a selection of stand-alone products that are ideal for the use with the X-Force range.

- SwitchLite detectors will link together fixed output High Frequency versions of X-Force, only providing light when it is needed. For indoor or outdoor applications, where a high IP rating is required, the SwitchLite IP64 sensor (available in white or black) is the ideal choice. In corridor or warehouse applications there are a number of options, including the wall mounted SwitchLite Long Range sensor, with a 12 metre detection range. The recessed wall mounted SwitchLite sensor comes with a 30 metre detection range, helping to save energy when the location is not occupied.
- RotaryDim enables users to manually control DSI dimmable (HFD) versions of X-Force. This product is used like a standard domestic rotary dimmer, but provides the benefits of digital dimming.

- Installing SensaDigital allows dimmable versions of X-Force to be both daylight and presence linked. The surface mounted multi-sensor head controls a group of X-Force luminaires, incorporating up to 8 DSI (HFD) ballasts. Using the infra-red Sensa programming tool, the parameters of the multi-sensor can be easily configured. Light level, time delay to switch Off, start-up level, fading and operation mode (absence or presence) can be set.

If you require more information on the Thorn Indoor Lighting Controls portfolio, please contact your Thorn representative, or visit our website: www.thornlighting.co.uk

Presence-link indoors and outdoors with SwitchLite MWA SLD IP64 (white 96233650, black 96233649)

SensaDigital multi-sensor connected to luminaire group (max. 8 ballasts in total)

X-Force luminaires – tested to the highest standards

In harsh and difficult environments, it is important to know that when the X-Force luminaire is selected to do a job, it will perform to the highest standards.

We expect an IP65 luminaire to resist the effects of dust and moisture, but there are often additional features required, such as resistance to...

- Impact
- Chemical corrosion
- High temperatures
- Low temperatures
- Strong winds and rain
- Fire

The Thorn X-Force range includes luminaires that are designed to satisfy these requirements and continue to provide high standards of performance and efficiency.

When a professional IP65 proof range is designed, it is essential that it will perform to the highest standard expected from a Thorn luminaire. To this end, the X-Force range is subjected to a number of industry recognised tests and procedures that guarantee the quality of the product.

Resistance to dust and moisture

The X-Force range is IP65 as standard. The IP rating is a widely recognised Ingress Protection classification that defines the degree of protection provided by an enclosure using a two digit number. The first number identifies resistance to the ingress of solids and the second digit details resistance to the ingress of liquids.

First Digit	Degree of protection	Second Digit	Degree of protection
5	Protection against dust (dustproof)	5	Protection against water jets
6	Dust-tight (no dust entry)	6	Protection against prolonged exposure to extreme water jets

Reliability in service

X-Force luminaires are subjected to a wide range of tests in accordance with national and international standards, such as EN 60598. Our testing capabilities actually extend beyond the standard requirements, covering areas such as Electromagnetic Compatibility (EMC) and Electromagnetic Fields (EMF). These standards ensure that the luminaires are fully safe as regards their electrical, thermal and mechanical properties.

However, deterioration in performance or appearance could occur during service. This may be the result of attack from the environment or the lamp within the luminaire itself. Additional tests are therefore applied to ensure these factors are controlled. Changes in technology mean that accelerated testing can now be successfully incorporated in to Thorn product design. These include life tests, UV degradation, chemical resistance, spectrum analysis, corrosion and salt spray tests.

Mechanical tests

Tests subject components to torques and forces that may occur in practice. A spring-operated impact hammer is used to test the mechanical strength of components and a vibration rig to replicate exterior windage.

IP tests

For an IP65 classification (dust-tight and jetproof), luminaires must resist ingress of dust with a particle size down to 1 micron and resist ingress of water from a hose or jet pressure of 30KN/m². Luminaires are switched on during testing and allowed to reach their normal operating temperature, as it needs to be established whether water or dust is drawn in when the pressure drops.

Electrical tests

A basic safety requirement is that no live parts should be accidentally touched. This is checked using a standard test finger. Luminaires must satisfy requirements such as minimum creepage distances across the surface of insulating materials, and minimum clearance distances between live parts and earth or touchable metal parts. Luminaires also have to pass high-voltage flash tests and insulation resistance tests in humid conditions.

Thermal tests

A standard draught-free room is usually used for temperature measurement. The components inside the luminaire are fitted with many thermocouples and the fitting is operated under specific conditions until the temperatures indicated by these thermocouples are stable.

Environmental tests

Luminaires are subjected to long-term environmental testing and installed outdoors so the full effect of weathering can be seen. UV degradation tests (discharge rig) and salt spray test chambers are employed for accelerated corrosion testing. The latter consists of a controlled temperature environment in which corrosive mist, usually based on sodium chloride, is produced. Chemical and stress-crazing tests are conducted with samples immersed in or suspended above various chemicals.

X-Force – easy to install

1.

2.

3.

4.

5.

6.

7.

8.

1. Unpack the luminaire. Open and remove the bag of installation accessories from the canopy.
2. Fit the toggles to the canopy. Once fitted, the toggles are designed so that they do not come adrift from the canopy, which is beneficial during installation or maintenance.
3. Fit the quick-fix brackets onto the ceiling.
4. Snap the canopy into the quick-fix brackets. It will easily click into place.
5. Prepare the luminaire for the electrical connection. For easy installation, hinge the gear tray on the gear tray clips, insert cables through the sealing grommet and attach to the plug-in terminal block.
6. Align the gear tray with the stainless steel gear clips.
7. Snap the gear tray into place.
8. Align the diffuser into the canopy and complete the installation by snapping the toggles into place.
9. Test the luminaire.

Luminaire mounting positions

Chemical resistance table

When selecting an X-Force fitting for an application, you will need to consider how external chemical substances may affect the luminaire. This may be a corrosive element in the atmosphere or cleaning agents used in the location. No materials can withstand the effects of every chemical and it would be difficult to display the entire list. However, the table below is a selection of the most common chemicals that are used in applications where X-Force is likely to be installed. The information contained in the table is valid under the following conditions:

- The chemical substance listed in the table is an element and not part of a chemical compound.
- The ambient temperature is 22°C.

Chemical Type	Chemicals Specific	ImpactForce	CorrosionForce	ColdForce	HeatForce	StormForce	StormForce
		GRP body	GRP body	GRP body	GRP body	GRP body	GRP body
		PC diffuser	PMMA diffuser	PC diffuser	PC diffuser	PC diffuser	PMMA diffuser

This information is provided to give guidance about luminaire selection, assuming prolonged exposure to potentially aggressive chemicals or atmospheres. Occasional exposure to low concentrations of potential aggressors is unlikely to be harmful to any of these luminaires. The risk of damage to the luminaires is dependent on the concentration of the aggressor, the duration and frequency of exposure and environmental conditions. If there is any doubt about the suitability of a luminaire for a particular application, please consult your local Thorn representative.

X-Force in action

It is the choice of lighting that determines whether an area is safe – or potentially dangerous. Wherever water, dust and electrical lighting are combined, and especially in the presence of corrosive vapours or extreme temperatures, dependable lighting is essential.

And that is why Thorn's X-Force range has a lot to live up to. Specific products cater for hot, cold, stormy, corrosive and impact related conditions, enabling individual design and performance requirements to be met. Chosen for safety and dependability, X-Force luminaires provide highly effective and efficient lighting in the most hostile of environments.

Many areas can be considered as hostile, from an open walkway in a coastal power plant to a large and complex brewery. Here we have selected frequently occurring applications and explored the particular lighting issues relating to them. These illustrations show a flagship installation of X-Force luminaires at a large food distributor in the UK, where chilled and frozen food products are stored and distributed from a modern warehouse.

The varied range of X-Force luminaires has enabled the customer to exceed the requirements of each specific application area whilst maintaining clear uniformity of design throughout the distribution centre.

Warehousing

The leading image shows ImpactForce luminaires mounted in a racking area. The main issues here surround the dangers from moving vehicles, such as forklift trucks, that can collide with fittings and cause potentially disruptive vibration. The high impact polycarbonate diffuser of ImpactForce will resist a direct impact of up to IK09 and still continue to operate. ImpactForce offers a wide range of variants, including emergency, High Frequency Digital dimming and T16 (T5) lamp options.

Cleaning areas

Lighting in the food industry needs to ensure strong task illumination and help maintain uncompromising standards of hygiene. The food and drink industry covers a vast range of working areas, some of which are dusty, damp, corrosive and laden with oil and fat vapours. In the case of this food distributor, specialised cleaning agents have to be used, which could damage or inhibit the performance of the luminaires.

CorrosionForce overcomes these issues and meets tough regulations set by the British Retail Consortium (BRC) and the International Food Standards (IFS). These guidelines state that luminaires positioned near the product must be housed in a secure enclosure, where no component parts can fall into the product. The fittings need to be easily cleaned, maintained and re-lamped.

Crucially, the products must be constructed using materials with a finish that will withstand frequent cleaning with inorganic chemical agents and possible hosing down.

X-Force exceeds all these requirements. It is IP65 rated and supplied with stainless steel toggles, quick-fix brackets and a chemical resistant PMMA diffuser (see page 15). Dimmable versions are also available.

Cold store

The final image shows ColdForce luminaires installed in the frozen food section of the distribution centre. Special attention must be given to cold stores to ensure the lamp and luminaires chosen are capable of optimum performance at very low temperatures. The most common problems in this kind of application are starting and icing up. Although fluorescent lamps are sensitive to temperature, the ColdForce luminaire range is specifically designed for cold stores. Fully tested lamp sleeves and special control gear enable luminaires to maintain good light output and strong reliability at temperatures down to -30°C.

* Depends on application. Please contact your Thorn representative

ImpactForce has been fitted in the storage and racking areas because of its robust construction and resistance to impact and vibrations.

Luminaire used in the cleaning bays have to serve a dual function of hygiene and resistance to cleaning agents. CorrosionForce overcomes the problem by maintaining optimum performance in atmospheres where inorganic chemicals are present.

In the frozen food sector the produce has to be stored at temperatures well below freezing. The logical answer here is ColdForce, which will perform at temperatures as low as -30°C.

ImpactForce

A high performance impact resistant, IP65 proof fluorescent range.

ImpactForce is a rugged luminaire that is suitable for a wide range of applications that are indoors or in semi-outdoor areas. In industrial locations there are dangers from moving vehicles and machinery, which can cause accidental impact damage to the luminaire. The diffuser has been designed to withstand impacts of up to IK09 and continue to operate. Other suitable locations are car parks and pedestrian subways, where the tough construction and vandal resistant toggles deter any unwanted interference.

ImpactForce has a wide range of variants, including T16 (T5) and T26 (T8) lamp options, plus emergency and High Frequency Digital dimmable options.

Lamps

- ☐ 18-70W T26 (T8) (FD) linear fluorescent. Cap: G13
- ☐ 28-80W T16 (T5) (FDH) linear fluorescent, Cap: G5

Materials/Finish

Canopy: glass-fibre reinforced polyester.
 Diffuser: polycarbonate with linear prisms.
 Gasket: expanded polyurethane.
 Toggles: stainless steel.
 Gear tray: steel, white enamelled finish.

Installation/Mounting

Cable entry positions at the back and each end of the fitting. Supplied with IP65 grommet. Stainless steel quick-fix brackets supplied with each luminaire. Stainless steel toggles are captive in the canopy to prevent loss during maintenance and the steel gear tray is retained by finger-operated spring latches. Accessory kits for BESA box mounting, conduit mounting, chain suspension and catenary suspension are all available. Through wire kits can be specified for use with non-emergency versions (see accessories listing).

Standards

Designed and manufactured to comply with EN 60598 Emergency EN60598 2.22.
 Ⓛ Class I Electrical
 IK09 (diffuser)
 IK03 (canopy)
 850°C fire retardant (glow wire test)

Specification

To specify state:
 High performance, IP65, dust and moisture proof impact resistant luminaire with GRP canopy, polycarbonate diffuser and stainless steel toggles, 18-70W T26 (T8) linear fluorescent lamps or 28-80W T16 (T5) linear fluorescent lamps, digital dimming and emergency options, with High Frequency gear.
 As Thorn ImpactForce.

Key Features

- GRP canopy
- High impact polycarbonate diffuser
- Choice of T26 (T8) or T16 (T5) lamps
- High Frequency control gear
- Integral 3 hour SelfTest maintained emergency versions
- High Frequency Digital dimmable (DSI) options
- Horizontal or vertical applications
- Vandal resistant
- Stainless steel toggles
- Through wire options
- Quick-fix brackets supplied
- LSOH cable as standard

Applications

- Industrial warehouses
- Subways
- Storage sites
- Lavatories
- Changing rooms
- Garages
- Underground car parks
- Railway platforms
- Loading bays
- Factories
- Sport stadiums
- Work areas
- Multi storey car parks
- Stadia

CorrosionForce

A high performance, corrosion resistant IP65 proof range. Made from materials selected to withstand aggressive atmospheres laden with salts, acids and mineral oils.

CorrosionForce is constructed from materials that make it suitable for locations that are exposed to liquids or atmospheres that contain potentially corrosive chemicals. Typical areas include food processing areas or milk dairies, but also areas where specialised cleaning agents are used.

Please check page 15 of this brochure for guidance or contact your local Thorn representative if there is any doubt about the suitability of a luminaire when specifying CorrosionForce.

Integral emergency and High Frequency Digital dimmable options are available in the range.

Lamps

- ☐ 18-70W T26 (T8) (FD) linear fluorescent. Cap: G13

 Toggles: stainless steel.
 Gear tray: steel, white enamelled finish.

Installation/Mounting

Cable entry positions at the back and each end of the fitting. Supplied with IP65 grommet. Stainless steel quick-fix brackets supplied with each luminaire. Stainless steel toggles are captive in the canopy to prevent loss during maintenance and the steel gear tray is retained by finger operated spring latches. Accessory kits for BESA box mounting, conduit mounting, chain suspension and catenary suspension are all available. Through wire kits can be specified for use with non-emergency versions (see accessories listing).

Standards

Designed and manufactured to comply with EN 60598 Emergency EN60598 2.22.
 Ⓛ Class I Electrical
 IK02 (diffuser)
 IK03 (canopy)

Specification

To specify state:
 High performance, IP65, dust and moisture proof corrosion resistant luminaire with GRP canopy, PMMA diffuser and stainless steel toggles, 18-70W T26 (T8) linear fluorescent lamps or 28-80W T16 (T5) linear fluorescent lamps, digital dimming and emergency options with High Frequency gear. As Thorn CorrosionForce.

Key Features

- GRP canopy
- Corrosion resistant PMMA diffuser
- Choice of T26 (T8) or T16 (T5) lamps
- High Frequency control gear
- Integral 3 hour SelfTest maintained emergency versions
- High Frequency Digital dimmable (DSI) options
- Good chemical resistance
- Horizontal or vertical applications
- Stainless steel toggles
- Through wire options
- Quick-fix brackets supplied
- LSOH cable as standard

Applications

- Abattoirs
- Agricultural buildings
- Factories
- Garages
- Kitchens
- Plant rooms
- Process areas
- Transport terminals
- Wine Cellars
- Paper processing
- Textile processing plants
- Cheese dairies

CorrosionForce	Diffuser PMMA	Canopy GRP

Glow wire test	650°C	850°C
Heat resistance of luminaire plastics	95°C	160°C
UV Transmittance	91%	n/a

ColdForce

A high protection IP65 proof fluorescent range for use in low temperature environments.

ColdForce has been developed for use in low temperature applications. There are problems associated with standard fluorescent lamps when lighting low temperature locations such as chill rooms and cold stores. The low temperatures can affect the starting circuit and light output. ColdForce overcomes these problems by incorporating an Industrial Ballast. This allows ColdForce luminaires to operate at temperatures as low as -30°C, making this fitting ideal for cold food storage areas. Additionally, to ensure good performance and to minimise maintenance costs in ColdForce installations, standard fluorescent lamps are fitted into thermal over tubes.

Lamps

□ 36-58W T26 (T8) (FD) linear fluorescent. Cap: G13

Materials/Finish

Canopy: glass-fibre reinforced polyester.
 Diffuser: polycarbonate with linear prisms.
 Gasket: expanded polyurethane.
 Toggles: stainless steel.
 Gear tray: steel, white enamelled finish.

Installation/Mounting

Cable entry positions at the back and each end of the fitting. Supplied with IP65 grommet. Stainless steel quick-fix brackets supplied with each luminaire. Stainless steel toggles are captive in the canopy to prevent loss during maintenance and the steel gear tray is retained by finger operated spring latches. BESA box and conduit mounting, chain suspension, catenary suspension kits and through wire kits are all available (see accessories listing)

Specification

To specify state:
 High performance, IP65, dust and moisture proof impact resistant luminaire with GRP canopy, polycarbonate diffuser and stainless steel toggles, 36-58W T26 (T8) linear fluorescent lamps, Industrial Ballast for reliable operation down to -30°C, thermal over tubes fitted to standard lamps for low maintenance.
 As Thorn ColdForce.

Key Features

- GRP canopy
- High impact polycarbonate diffuser
- Low temperature Industrial Ballast
- Low temperature over tubes
- Does not require special fluorescent lamps
- Low maintenance costs
- Horizontal or vertical applications
- Stainless steel toggles
- Quick-fix brackets supplied
- LSOH cable as standard

Applications

- Chill rooms
- Process areas
- Wine Cellars
- Cheese dairies
- Cold stores

HeatForce

High performance IP65 proof luminaire that will continue to perform in high ambient temperature locations.

HeatForce is suitable for tough industrial applications where ambient temperatures can rise up to 65°C. Extreme temperatures have an immediate and lasting effect on the performance and reliability of standard proof luminaires. HeatForce has been designed to operate safely in such demanding conditions, being fitted with a high performance Industrial Ballast that will give over 50,000 hours operation. All HeatForce fittings comprise of a single lamp in a twin body.

StormForce

A specialist range of IP65 proof luminaires suitable for exterior environments that are subject to rain and strong winds.

StormForce has been developed for applications that require IP65 proof luminaires to perform in environments exposed to rain and strong winds. Luminaires mounted on poles, metal gantries or flexible structures may distort under high winds and cause the housing to twist and deform the IP65 seal. StormForce is specifically designed for tough outdoor applications such as power stations, process plants and coastal locations.

Lamps

☐ 36-70W T26 (T8) (FD) linear fluorescent. Cap: G13
 ☐ 35-49W T16 (T5) (FDH) linear fluorescent, Cap: G5

Materials/Finish

Canopy: glass-fibre reinforced polyester.
 Diffuser: Choice of PMMA (acrylic) or polycarbonate with linear prisms.
 Gasket: expanded polyurethane.
 Toggles: stainless steel.
 Gear tray: steel, white enamelled finish.

Specification

To specify state:
 High performance, IP65, dust and moisture proof impact resistant luminaire with a reinforced GRP canopy suitable for exposed exterior locations, polycarbonate diffuser or acrylic diffuser, stainless steel toggles, internal steel channel, gull wing brackets, 36-70W T26 (T8) linear fluorescent lamps or 35-49W T16 (T5) linear fluorescent lamps with High Frequency gear. As Thorn StormForce.

Key Features

- Reinforced GRP Canopy
- Choice of PMMA or PC diffuser
- Internal steel channel
- High Frequency control gear
- Stainless steel toggles
- Robust enclosure and long life seal
- Factory fitted gull wing brackets
- Emergency versions available
- High Frequency Digital dimmable (DSI) options
- LSOH cable as standard

Applications

- Outdoor processing plants
- Seafront areas
- Piers
- Transport areas
- Outdoor processing plants
- Power stations
- Exposed coastal locations
